

## Figurative Language ***DIFFERENT*** Annotation Instructions

Following the first annotation, we ask you to generate a “Different” sentence to the original sentence.

The “Different” definition is as follows:

1. Try to use as many words as possible from the original sentences.
2. The new sentence should have different meanings from the original. It must not have a similar meaning (Example J).
3. Try to use figurative words with a literal meaning.
4. Two ways to construct a “Different sentence”:
  - a. Construct opposite sentences:
    - i. Generate sentences by replacing metaphor/idiom words with opposite meanings in such a way that the sentences also express the opposite sense of the original sentence.
      1. You must target the metaphor/idiom words whenever you choose this option (Example L, M) or target words that directly affect the metaphor/idiom words (Example E).
      2. Targeting other words is not allowed (Example B).
  - b. Construct non-opposite sentences:
    - i. Use the metaphoric/idiomatic words as a literal meaning to express a completely different meaning than the original sentence (Example D, I, K).
    - ii. Generate sentences by replacing metaphor/idiom words with different words in a way so that the sentence also expresses a different meaning from the original sentence (Example A, C, D).
    - iii. You can combine i & ii (Example D).
5. Please mark whether you have chosen option a or option b.

	Sentences	Candidates	Figurative Language	Replacement	Negative	Not Allowed
<b>Metaphors</b>	-	-	-	-	-	
A	I'd forgotten to commit some local changes.	commit	commit	I had forgotten to make some local changes.	I had discarded some local changes.	
B	I'd forgotten to commit some local changes.	commit	commit	I had forgotten to make some local changes.	I had not forgotten to commit some local changes.	X

C	My intention was to highlight that camelCase or dash-case class names are perfectly fine to use in Angular templates.	highlight	highlight	My intention was to make clear that camelCase of dash-case class names are perfectly fine to use in Angular templates.	My intention was not to highlight a camel in the desert or find a needle in the street but follow the already existing template.	
D	If you can point me in the right direction, I'm happy to work on the fix!	point, fix	point	If you could show me what to do, I'm happy to work on the fix!	The point is on the right side of the circle, I'm happy to solve this geometry problem!	
E	It's a pretty confusing pattern to read and deal with.	pattern, deal	pattern, deal	It's a pretty confusing procedure to read and manage.	It's a pretty simple process to read and handle.	
<b>Idioms</b>	-	-	-	-	-
